4. Running It for Real (Gate 4)

Who owns it on Monday?

- **Product owner:** runs the pilot with the hotels and decides what to fix first.
- **Tech lead:** keeps the app working and is on call.
- **Budget owner:** the value lead tracks AI and scanning costs. At each hotel, the general manager signs off.

What we watch every week

What	Why it matters	Alarm if…
Requests read correctly (checked on a weekly sample)	Wrong reads mean wrong matches	Falls below 85%
Share sent to Claude or a person	Shows how often our model is unsure	Above 50% (time to retrain)
Suspicious messages flagged	Catches trick attempts	Any reaches a hotel without a person checking
Claude cost per successful result	Keeps it affordable	More than 10× our estimate
Reply time to planners	Our main promise	Over 1 hour
Space use per hotel	The whole point	Not rising after 60 days

If something breaks (fallback)

- **Claude is down or too expensive:** our own model keeps working in the browser, and the app says so on screen.
- **The model is unsure:** the request goes to a person on the hotel's events team.
- **The negotiation assistant gets confused:** it stops and hands over to a person. It can never go below the hotel's lowest price.

What it costs to run

- **Our model:** $0.
- **Claude:** about $0.00025 per request it reads.
- **Hosting:** about $100/month (estimate).
- **People:** on-site scanning and hotel onboarding are the main costs. The scan fee ($375 per space) is set to cover the visit.

90-day pilot plan

Days	What we do
1–30	Sign 3 Miami hotels. Scan and measure their indoor and outdoor spaces. Load their rate cards and the extras they're willing to offer.
31–60	Go live. Collect real planner requests (with permission) and label 500 of them.
61–90	Retrain our model on the real requests. Compare space use and reply times before and after.

Decide at day 90

- **Scale:** space use is up at least 5 points and hotels want to keep paying.
- **Fix and retry:** planners like it, but hotels aren't converting requests into bookings.
- **Stop:** hotels won't share rate cards or allow scans.
